

In the future, the INDUS compact Sets will be equipped with a steel cable and an additional pair of cable cores instead of just a simple steel cable.

So far, the cable of the contact edge (OPEN/CLOSE) had to be installed along the gates' entire length to connect it to the travelling coil core (SPK 54).

The new steel cable with the additional pair of cable cores allows for the contact edge (OPEN/CLOSE) to be connected directly to the travelling coil core with the help of two plug-type connectors at the clamping unit.

As usual, the steel cable is to be clamped between the travelling coil core (SPK 54) and the clamping unit. Strip back the insulation at every end of the steel cable. At the travelling coil core the cable cores are put into the plug terminals OPEN/CLOSE. The cables of the contact edge are to be put into the other two plug terminals.

At the clamping unit, put one cable core into one opening of each of the plug-type connectors. The other openings in each of the plug-type connectors are meant for the cables of the contact edge.

The new steel cable will be available with following INDUS compact Sets:

- |   |                                      |             |
|---|--------------------------------------|-------------|
| - | INDUS compact classic 74-312 Set „S“ | (1206-0010) |
| - | INDUS compact classic 77 R Set „S“   | (1210-0660) |
| - | INDUS compact easy 77 R Set „S“      | (1320-0910) |
| - | INDUS compact onboard 70-755 Set „S“ | (1203-0050) |
| - | INDUS compact rail 71-242 Set „S“    | (1204-0010) |
| - | INDUS compact rail 74-332 Set "S"    | (1206-0080) |
| - | ISB A4 Montageset                    | (1209-0020) |
| - | ISB A5 Montageset                    | (1209-0070) |
